

Advanced Test Solution

Testdata in no time

GTW advanced test solution (ATS)

Do you spend too much time on creating SAP testing- and training systems in mass data management?

Would you like to recreate and analyse incidents quickly and completely on the testing system?

How about working with anonymous master data on your quality assurance,, testing and development systems, to meet the latest privacy requirements?

GTW ATS is the solution for an efficient transfer of anonymous data from your productive system - all performant within SAP, without the need of separate infrastructure.

We already created customized templates for the following SAP modules:

- SAP FI-CA/RM-CA
- SAP IS-U
- SAP FS-CD
- SAP CI

These modules will be available shortly:

- SAP FI
- SAP CO
- SAP SD
- SAP MM

Customer specific tables can be created easily, fast and individually via ATS Customizing.

ATS at a glance

ATS helps your business to create lean and consistent development-, testing- and training systems. Up to date and relevant testing data can easily be transferred from your productive system to the new destination.

The quality of your developments will increase sustainably by the provision of productive and anonymous testing data.

The regular update of your testing- and development data can lower your maintenance and infrastructure expenses significantly. At the same time, it increases the efficiency and reliability of your SAP solution.

ATS as a migration tool

But the Advanced Testing Solution holds potential for even more. It is the ideal tool for SAP to SAP migrations.

The transfer of single company codes with all relevant data will be a walk in the park.

Especially with Mergers & Acquisitions, time is a crucial factor. With ATS there will be no more time consuming and costly analyses and migration strategies.

The Advanced Testing Solution is the product of more than 10 years of experience in numerous migration projects and the cooperation with our customers.

Our "ATS Migration Strategy" is based on a three step concept:

1. ATS basic-setup
2. Individual customizing
3. Connection of the systems

Experience shows us that this three step migration strategy perfectly fulfills our customers requirements.

Features

- Performant data transfer between systems and clients
- Refreshing of testing data via simple deletion and new file import
- 1:1 transfer or reallocation of number ranges
- Various methods for anonymizing you master data in "stand-alone" or "transfer" mode
- Flexible, customer-specific data selection
- Ad hoc transfer of single customers

Your advantages

- Creation of lean and easy to use SAP testing and training systems
- Highest possible data privacy protection via anonymizing of production data
- Fast processing of incidents
- Significant reduction of maintenance- and infrastructure expenses by reduction of time consuming system copies
- Shorter development cycles through up to date testing data
- Long term increase in the quality of your development- and testing environment
